Our range of Automation includes outlet-opening devices & a suite of sensor monitoring products for a completely automated farm management system.

- Monitor and Control your Irrigation Schedule In-field at the Device
- Monitor and Control your Irrigation Schedule from our App, on your Phone or Web Browser
- Problems with connectivity in the past have been addressed with multiple solutions available
- Padman Automation can be integrated with your current irrigation system

GATEWAY FARM RADION AND CONNECTIVITY

On-farm communications are handled via a radio system based on LoRaWAN technology.

Gateway devices provide the link between the farm with Apps.

Gateways and devices have a range of 8km depending on terrain.

Gateways are remotely monitored by Padman system for critical faults.

Gateways need to be installed as high and as central as possible to devices, ie: a farm silo or machinery shed.

These are installed by the farmer with help from the Padman team.
